## The Lafayette Trail, Inc. Historic Marker Installation, Maintenance, and Cleaning Tips

Your marker is manufactured to last for many, many years. But did you know that regular maintenance can help extend your marker's "like new" look for decades to come? Here are a few helpful tips to get you started.

### Carefully plan placement of your marker

Markers last much longer when they are placed in a location that minimizes the impact of the elements. Take into consideration the proximity of your planned location to roads, passing snowplows, trees, utility poles, water, and other hazards.

### Marker installation instructions

The historical marker is manufactured to sit down on top of a 7 'round extruded aluminum post that has been provided. The marker is secured to the post by set screws that are already inserted in the collar of the marker.

The post is designed for 36" insertion in the ground. This leaves approximately 4' of post above ground.

Reviewed by Angle at Building Toning Roads

4 FEET ABOVE GROUND

3 FEET BELOW GROUND In 10"-12" Diameter Hole

- Using a post hole digger, dig a hole 10"- 12" in diameter and 36" deep. Place the post in the hole and plumb and brace the post.
- 2. Fill the hole with concrete (Sacrete works fine). If being installed in a lawn, you might consider cutting the entire bottom out of a 5-gallon plastic bucket to use as a form. Slip the bucket down over the post so the bottom edges are resting on the ground at the top of the hole. When you fill the hole with concrete, bring the concrete up about 4 6" above the ground inside the bucket form. When hardened, cut the plastic form away at the concrete surface and you have a nice curb around the post which will deter mowers and trimmers from damaging the post.

Note for cold Winter climates - where the frost penetrates deep into the ground:

Insert a sonotube concrete form into the hole before placing the post and filling with concrete. The smooth sides of the resulting foundation will minimize future tilting of the sign out of plumb if the ground heaves from freezing

- Before trying to place the marker on the post, use an Allen wrench to back the set screws part way out of their holes. They have been screwed on for shipment and unless they are backed out part way the marker will not sit down on the post.
- 4. We recommend using a piece of poly plastic between the connecting surfaces of the pole and marker. This is a simple yet effective way of keeping the surfaces from corroding together and making removal of the marker from the pole much easier if ever needed. An oversized piece of plastic can be cut, then draped over the top of the pole, and temporarily taped in place while the marker is set on the pole. Once the screws of the mount have been tightened, carefully the coating on the pole.
- 5. Place the marker on the post facing it in the direction desired. Check it for vertical alignment looking straight at the marker and then moving 90 degrees to view the edge of the marker. Secure the marker by tightening the set screws. Adjustments in alignment can be made using the set screws.
- 6. The marker can be made theft proof by drilling the flats off the set screws after the marker is secured to the post. Simply take a 1/4" drill bit and drill down into the center of the set screws going only to the bottom of the hole. This will prevent removal of the set screws. If you do this and the marker should need to be removed in the future, the set screws will have to be drilled out.

Installation takes less than one hour.
Allow 24 hours before removing the bracing.

### Annual cleaning

Cleaning your marker once a year with a mild mix of soap and water will extend the life of your marker. In doing so, you are removing a layer of road salt, dust, pollen, tree sap and other contaminants that will eventually degrade your marker's coating. You may have to clean your marker more frequently if it is exposed to extreme conditions. Non-metal brushes or cloth are recommended for cleaning.
